

Make your own Turbine

Activity sheet:
Make it

You'll Need:

- A print out of the turbine template
- Coloured pens or pencils
- A pair of scissors
- Some Blue tack, white tack or similar
- A sharp pencil
- A paper fastener
- A bead that will thread over the paper fastener
- A cardboard tube (like an empty kitchen roll tube)

How to make it:

Check with an adult first, they may want to help you with the trickier bits

- Cut out the template on the next sheet
- Colour it in, making it as colourful as you can - you can even colour in both sides
- Decorate your cardboard tube too for extra colour
- Using the pencil and blue tack you can now push through the five holes marked
- Once you have made the holes, fold the ones on the sides towards the middle one and push your paper fastener through them all
- Thread the bead onto the paper fastener
- Using your pencil and blue tack again, make a hole near the top of your cardboard tube
- Push the paper fastener in the hole and fold the ends out, so it keeps the turbine in place
- Blow on your turbine to make it spin!

Make your own Turbine

Activity sheet:
Make it

Making your turbine:

You can have a go at making your own turbine by cutting around this template with a pair of scissors.

You may need an adult to help you with this.
